

OEI Services and Pricing

Current capability pathways, public pricing, and optional interventions

OEI engagements are scoped according to the capability, organizational context, and level of intervention required. The Institute is developing the broader practitioner and commercial structure. Final scope and pricing are determined during engagement scoping.

Two ways to work with OEI

Build capability internally

Train and certify members of your organization to apply the OEI methodology. Practitioner development and certification pathways are taking shape under Institute governance. Flat fee: \$10,000 USD.

Bring in OEI practitioners

Have qualified practitioners perform the diagnosis and methodology application for your organization. Current public range for OEI engagements: \$20,000-\$45,000+ USD. Scope varies with organizational size, complexity, and the operational territory investigated and addressed.

Focused Investigations

A bounded entry point to investigate a specific operational domain through evidence-first OEI inquiry. Each investigation is scoped to the question and the work required; they are not identical, fixed-scope packages. Each includes a 4-Day OEI Diagnosis. Current public range: \$1,000-\$4,000 USD.

- **Founder Absence Simulation:** Tests what fails, stalls, or escalates when the founder steps away.
- **Institutional Memory Recovery Sprint:** Recovers essential knowledge trapped in people or history.
- **Workflow Momentum Analysis:** Locates waiting, friction, and loss of execution momentum.
- **Operational Stack Review:** Evaluates the fit and interaction of tools, systems, and workarounds.
- **Handoff Failure Analysis:** Traces where ownership, readiness, or context breaks during transfer.

Optional AI Enablement

AI Enablement may be added to either OEI pathway when findings identify a worthwhile opportunity. It is scoped from the evidence and is not an automatic part of every engagement. OEI may determine that AI is not the right response.

Indicative stage	Planning estimate
Investigate	Approximately \$3,500
Design	\$2,000-\$5,000
Build & Validate	\$3,000-\$12,000
Enable & Handoff	\$1,500-\$4,000

Illustrative overall estimates: a small intervention may be approximately \$5,000-\$14,000 USD; a more substantial intervention may reach \$20,000-\$35,000+ USD. Stages are not necessarily charged independently or delivered in sequence.

Entropy Compatible Hiring

ECH Version 0.1.3 BETA is separate Windows desktop software with ten role-agnostic interview instruments and an Existing Employee Contribution Mapping module. It can be used independently; a formal OEI engagement is not required. One-time purchase range: \$950-\$1,450 USD.
