

OEI Institute

Operational Forensics for Growing Teams

INTERIM ONE-PAGER | SEPTEMBER 2026

The OEI Institute is the governing institution for the Operational Entropy Index methodology. It exists to help growing organizations understand and address the operational strain that emerges through growth.

THE OPERATIONAL ENTROPY INDEX

The Operational Entropy Index is a structured methodology for examining how operational strain develops across growing teams. It provides a shared framework for investigation, analysis, and responsible application.

THE FIVE PILLARS

Founder Dependency - reliance on key people for decisions and continuity. **Knowledge Logistics** - whether critical information reaches the people who need it. **Workflow Velocity** - where execution loses momentum. **Tool Discipline** - whether systems are fit and consistently used. **Handoff Integrity** - whether ownership and context transfer cleanly.

OPERATIONAL FORENSICS

Operational forensics examines how work actually functions through evidence. It reconstructs movement across people, systems, records, and workflows, separates observation from interpretation, tests explanations, and reaches findings that can support action.

THE INSTITUTE'S ROLE

The Institute maintains the established OEI canon, methodological definitions, evidence and practice standards, and the deliberate evolution of the methodology. It is developing practitioner training, competency assessment, and certification infrastructure. It also maintains documentation, structured workflows, diagnostic tools, and software that support repeatable application.

HOW OEI REACHES ORGANIZATIONS

OEI may reach organizations through Institute-maintained tools, direct engagements, and structured use of the methodology. Services and Pricing are being restructured around the Institute framework as the delivery model develops.
