

Operational Entropy Index (OEI)

One-page overview

OEI identifies, measures, and reduces the friction, dependency, and unnecessary complexity that accumulate as organizations scale. Entropy cannot be permanently eliminated; OEI helps organizations mitigate it and build mechanisms that keep it from rapidly returning.

WHAT OEI EXAMINES

Founder Dependency - reliance on key people for decisions and continuity. **Knowledge Logistics** - whether critical information reaches the people who need it. **Workflow Velocity** - where execution loses momentum. **Tool Discipline** - whether systems are fit and consistently used. **Handoff Integrity** - whether ownership and context transfer cleanly.

HOW IT WORKS

Structured interviews, workflow mapping, operational testing, and root-cause mapping produce a baseline OEI score, a map of operating leaks, and prioritized next steps.

CORE ENGAGEMENTS - BASELINE PRICING

Engagement	Duration	Prerequisite	From
Initial OEI Diagnosis	4 days	None	\$2,000
15-Day OEI Audit	15 days	Diagnosis	\$8,000
30-Day OEI Audit	30 days	Diagnosis	\$15,000
Single Pain Point Sprint	30 days	Diagnosis + audit	\$25,000
Operational Entropy Reset	90 days	Diagnosis + audit	\$45,000
One-Year Trend Analysis	4 quarterly sessions	None; engagement recommended	\$5,000/year

Pricing shown is baseline for companies under \$5M in annual revenue and scales by revenue tier. \$100M+ engagements are custom scoped.

OTHER WAYS TO START

Focused Operational Investigations: Five bounded investigations for already-visible problems, typically \$1,000-\$4,000 USD. **Entropy Compatible Hiring:** Separate Windows desktop Beta software with ten role-agnostic interview instruments; \$950-\$1,450 USD as a one-time purchase. Neither requires a formal OEI engagement.

PATHWAY RULE

Most comprehensive work starts with the Initial Diagnosis. Audits require diagnosis; sprints and resets require diagnosis plus audit. One-Year Trend Analysis is standalone but most useful with a completed or active engagement.
